Building AWCS to one of the world’s biggest city centers in 4 months.
Park Zaryadye locates near Red Square in Moscow, Russia – on a former Rossiya Hotel site. The famous and glorious hotel was built 1967.

2015
Planning of the Zaryadye park begins. The Chief Architect is Vladimir Legoshin from MAHPI.

In 2006, the hotel was demolished and soon the idea of a modern city park was born.

9 September 2017
The park to be opened by the Moscow 870 years’ celebration.
Environmental Requirements for the Green City Park

- Sustainable technologies used in creating an artificial microclimate in different parts of the 13 hectares park.
- Russia's 4 diverse landscapes brought together, enabling the millions of visitors to enjoy tundra, steppe, forest, and wetland circumstances.
- Park infrastructure hidden under the landscape.
- The heavy truck traffic minimized.
Requirements for Efficient Solid Waste Management

• Waste not transported with trucks.
• Reliable system for collecting waste produced by 12 million park visitors yearly.
• Trustworthy partner with track record of successful AWCS implementations.
AWCS Solution – Waste Transferred Underground

• MariMatic® Ltd., together with Moscow based partner OOO Telekom Engineering, developed the ultimate underground waste collection solution to serve the park in collecting mixed waste, but also to meet the park’s requirements for sustainability and energy efficiency.

• MariMatic designed, supplied, built and commissioned the AWCS solution.
• Waste fraction: mixed waste
• 10 waste collection stations
• 11 doors for chutes
• 10 formators
• Vacuum pipeline length: 600 m
• 3 x 37 kW vacuum blowers
• 2 waste containers
• 1 compactor
• Build up June - September 2017
